

PROBLEM–SOLUTION FIT

Institution Details Management System — ServiceNow Project

Purpose / Vision: Provide a structured way for an educational institution to maintain and manage student, faculty, branch and contact information in one accessible ServiceNow application.

1. CUSTOMER SEGMENT(S)

Who is your customer?

Primary customers: college/institution administrators, department or branch staff, faculty members and authorized staff who maintain institutional records.

End users: staff who need to view or retrieve student and faculty information quickly.

2. JOBS-TO-BE-DONE / PROBLEMS

Which jobs-to-be-done or problems do you address?

- Maintain student and faculty details in a structured record.
- Store information such as branch, student name, roll number, phone number, email and faculty name.
- Retrieve institutional records from a central list instead of depending on scattered/manual records.
- Control who can access or modify institutional data.

3. TRIGGERS

What triggers customers to act?

- Need to create a new student/institution record.
- Need to update existing academic or contact information.
- Need to search or verify a student's branch, roll number, faculty or contact details.
- Need to apply access controls to institutional information.

4. EMOTIONS: BEFORE / AFTER

How do customers feel before and after using the solution?

Before: difficulty locating the correct record, repeated manual work, uncertainty about where information is stored, and concern about unauthorized access.

After: information is organized in one system, records are easier to retrieve and update, and access can be controlled through ServiceNow security features.

5. AVAILABLE SOLUTIONS

Which solutions are available when customers face the problem?

- Paper registers and manual files — familiar, but difficult to search, update and maintain.
- Spreadsheets — easier to organize and search, but can become difficult to control and maintain across users.
- Separate departmental records — may duplicate information and make centralized retrieval difficult.
- ServiceNow-based application — provides structured records, forms/lists and access-control capabilities.

6. CUSTOMER CONSTRAINTS

What constraints prevent customers from taking action or limit their choices?

- Staff need suitable access permissions to view or modify records.
- Users need access to the ServiceNow application and a compatible device/browser.
- Data must be entered accurately to keep institutional records reliable.
- Existing institutional processes may limit how quickly records can be migrated or changed.

7. BEHAVIOUR

What does the customer do to address the problem and get the job done?

- Opens the Institution Details area and searches/filter records.
- Creates a new record when information is required.
- Enters or updates fields such as Branch, Description, Email, Faculty Name, Phone Number, Student Name and Student Roll Number.
- Uses administrative/security features such as Access Control to manage permissions.

8. CHANNELS OF BEHAVIOUR

What online and offline actions/channels are used?

Online: ServiceNow application, browser-based forms, lists, search/filter functions and administrative/security screens.

Offline: existing institutional registers, departmental records and staff communication used to collect or verify information before entering it into the system.

9. PROBLEM ROOT CAUSE

What is the real reason the problem exists?

Institutional information is often created and maintained by different people and departments. Without a structured central system, records can become scattered, duplicated, difficult to retrieve or difficult to protect. The project addresses this by creating a dedicated Institution Details structure within ServiceNow.

10. YOUR SOLUTION

What is your proposed/current solution?

Institution Details Management System in ServiceNow.

The project creates a structured table and user-facing records for institutional information. The demonstrated system includes fields for Branch, Description, Email, Faculty Name, Phone Number, Student Name and Student Roll Number. It also demonstrates administrative configuration and Access Control features to support controlled access to the data.

Expected value: centralized records, easier retrieval and updating, reduced dependence on scattered manual records, and better control over institutional data access.

Problem → Solution Fit Summary

The core problem is the difficulty of maintaining and accessing institutional information in a consistent and controlled way. The proposed ServiceNow solution creates a centralized Institution Details record structure, makes information searchable and manageable through forms/lists, and adds access-control capabilities for authorized use.

Note: This document follows the categories and questions in the supplied Problem–Solution Fit template. Project-specific details are based on the attached project demonstration.

Template reference: The supplied sample uses the Problem–Solution Fit structure covering customer segments, jobs/problems, triggers, emotions, available solutions, constraints, behaviour, channels, root cause and solution.
