

Project Planning Phase

Project Planning Template (Product Backlog, Sprint Planning, Stories, Story Points)

Date	
Team ID	
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value (ServiceNow Administrator)
Maximum Marks	5 Marks

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Environment Setup	USN-1	As an administrator, I can set up a ServiceNow Personal Developer Instance and log in as admin.	2	High	
Sprint-1		USN-2	As an administrator, I can create two test users, one with the itil role and one with the itil_admin role.	3	High	
Sprint-1		USN-3	As an administrator, I can verify the roles assigned to each test user.	3	High	
Sprint-1	Test Data	USN-4	As an administrator, I can create a Priority 1 incident and a Priority 4 incident to test the ACL.	4	High	
Sprint-1	ACL Concepts	USN-5	As an administrator, I can study ACL types, operations, Decision Type (Allow If / Deny Unless) and evaluation order.	5	Medium	
Sprint-1		USN-6	As an administrator, I can elevate to security_admin and review the existing incident ACLs.	3	High	
Sprint-2	ACL Creation	USN-7	As an administrator, I can create a new record-level ACL for the read operation on the Incident table.	5	High	
Sprint-2		USN-8	As an administrator, I can write an advanced script that checks Priority = 1 and the itil_admin role.	8	High	
Sprint-2		USN-9	As an administrator, I can set Decision Type to Deny Unless and configure Admin overrides and Description.	3	Medium	

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2		USN-10	As an administrator, I can save the ACL and confirm the script has no syntax errors.	4	Medium	
Sprint-3	Testing & Validation	USN-11	As an itil user, I can see Priority 4 incidents in the Incident list.	3	High	
Sprint-3		USN-12	As an itil user, I cannot see Priority 1 incidents, in the list or through a direct URL.	5	High	
Sprint-3		USN-13	As an itil_admin user, I can see all incidents including Priority 1.	3	High	
Sprint-3		USN-14	As an administrator, I can use Security Debugging to trace why access was allowed or denied.	5	Medium	
Sprint-3		USN-15	As an administrator, I can fix any issue found in testing and refine the script.	4	Medium	
Sprint-4	Documentation & Delivery	USN-16	As a student, I can capture screenshots of each configuration and test step.	4	Medium	
Sprint-4		USN-17	As a student, I can write the project details document.	5	High	
Sprint-4		USN-18	As a student, I can record a demo video of the working ACL.	5	Medium	
Sprint-4		USN-19	As a student, I can review and submit the project.	3	High	
Sprint-4	Extension	USN-20	As an administrator, I can explore applying the same approach to another field or a field-level ACL.	3	Low	

Project Tracker, Velocity & Burndown Chart

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	05 Oct 2026	10 Oct 2026		
Sprint-2	20	6 Days	12 Oct 2026	17 Oct 2026		
Sprint-3	20	6 Days	19 Oct 2026	24 Oct 2026		
Sprint-4	20	6 Days	26 Oct 2026	31 Oct 2026		

Velocity

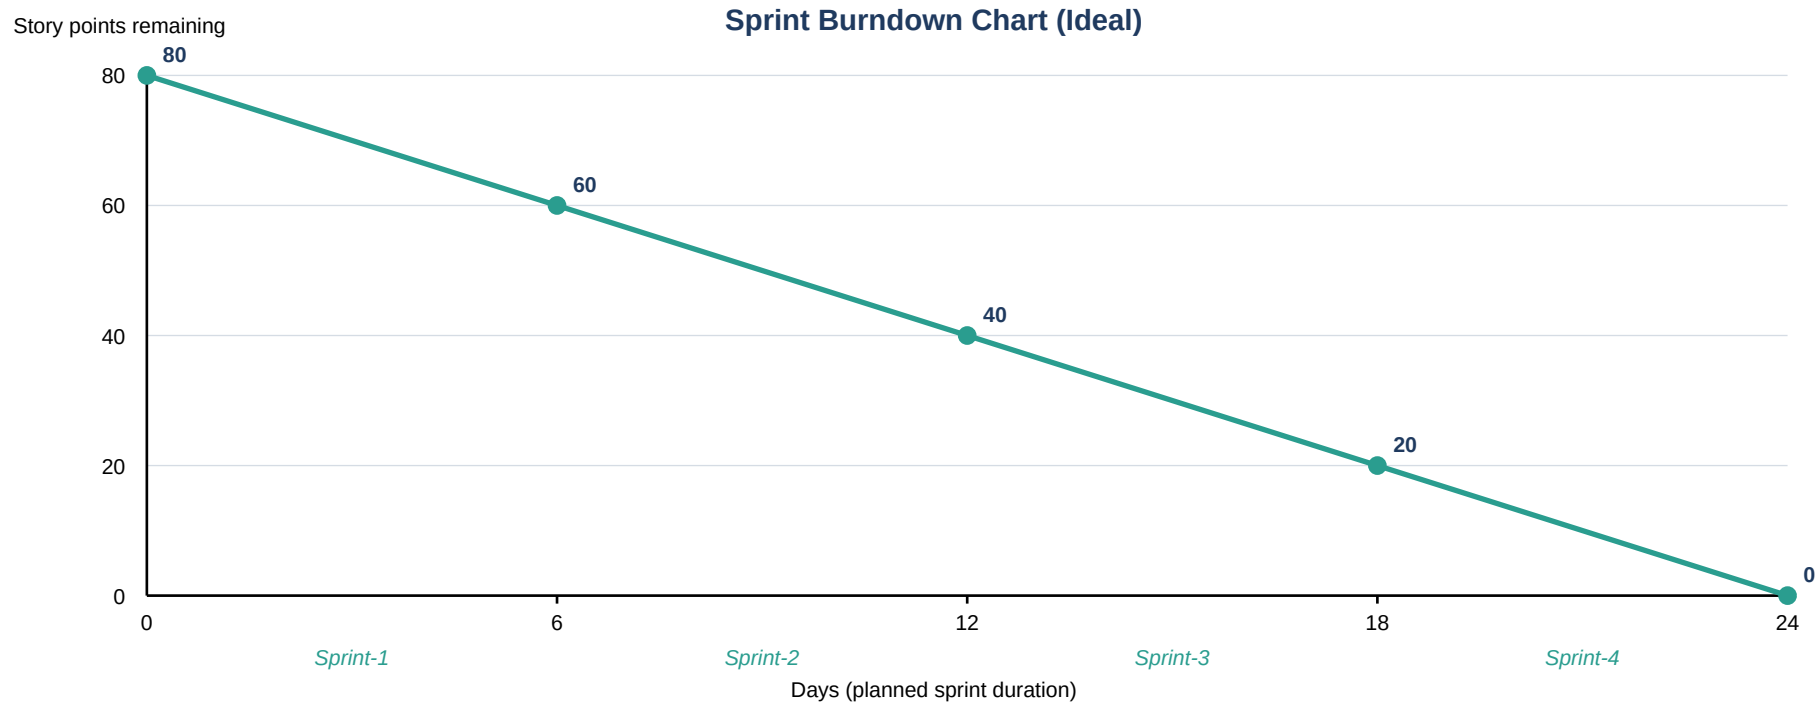

The sprint duration is 6 days and the team's velocity is 20 story points per sprint. The average velocity (AV) per iteration unit (story points per day) is the velocity divided by the sprint duration:

$$\text{AV} = \text{velocity} / \text{sprint duration} = 20 / 6 = 3.33 \text{ story points per day}$$

Total work = 4 sprints x 20 points = 80 story points, so at this velocity the project completes in 4 sprints (24 days).

Burndown Chart

A burndown chart shows the work left to do against time. The teal line is the ideal burndown: 80 story points at the start, falling by 20 points at the end of each sprint to reach 0 after Sprint-4. Plot the actual points remaining at the end of each sprint against it as the work is completed.
